No.

that

before for this course, I just want to mention
this is going to be friendly course ~~for~~
beginning will be good friendly ~~for~~ people
who are new for PHP I know for
experience back many years ago.

PHP - That PHP can difficult for some
people when they get started learning PHP
for the first time. PHP is considered why
easy languages programming languages
but again ~~it~~ it way your at
the moment so if you already know programming
language beforehand then PHP going to be quite
easy for you to learn And if you don't know
any ~~program~~ programming languages, it ~~will~~ will
be beginning

how PHP exactly work. So just mention
that this is going to be friendly for the
beginning slow climbing - at the ~~last~~
last we go on

now, two ~~are~~ course on my
channel teach PHP. This one right here start
~~with~~ if you don't know anything about PHP until
now. So it going to be what is ~~called~~ called procedural
procedural PHP and another course is called
Object Oriented PHP so if you know PHP ~~for~~
forhand and you want to learn Object Oriented
PHP you should another course

description if you want to check
So to begin it, let's talking about ^{what} exactly
PHP is what you ~~also~~ website

because you have learnt PHP before, ~~the~~ and you might have question about it and that I going to try answer in this video here. Before we start moving on to ~~at~~ learning PHP. Now I should ~~not~~ mention we will also learn how to install a server, a local machine in this video here. So if you don't know how to do that, you should probably not skip this video at ~~the~~ jump to the end of ~~the~~ video where I do how ~~to~~ to do that so that is required in order to get started PHP. So PHP stand for acronym for P H P Hypertext Preprocessor and what PHP is. It's scripting language run on server ~~side~~ rather on client. Would you might be we if you come ~~to~~ from javascript background. All ~~for~~ among of you come from CSS
